

Jordan X. King

46 Laurel St., Susquehanna PA, 18847
570-807-9694 | j0rdnk1ng2000@gmail.com

Qualifications

- Driven Software Engineer and Web Developer having amassed knowledge in web development, software applications, computer engineering, and IT. Eager to grow in these areas while adding more fields to their arsenal.

Education

York College of Pennsylvania | York, PA | May 2023

Bachelor of Science: Computer Science

Technology Summary and Coursework

Programming Languages: Proficient in: C++, Java, JavaScript, CSS, HTML, SQL, Liquid, Rust, and Kotlin

Systems: Linux, Eclipse, IntelliJ, OpenGL, Git, Unreal Engine, Unity

Coursework: Operating Systems, Data Structures, Program Language Design, Analysis of Algorithms, and Software Engineering and Design

Work Experience

Web Developer | Woolx & Hank's Belts | Endicott, NY | Sep 2024 - Present

- Developed and implemented bug fixes and new features for both sister companies' websites using Liquid, HTML, CSS, SCSS, and JavaScript, ensuring seamless user experience and functionality.
- Built custom applications to migrate scripts from an outdated platform to modern infrastructure using Rust, improving performance and scalability.
- Enhanced website accessibility by updating ADA compliance standards, including adding detailed ARIA roles and labels, adjusting color contrast, and optimizing navigation through tabbing.
- Streamlined development processes by integrating GitHub for version control and improving organization with Airtable, facilitating documentation, production tracking, and backup management.
- Assembled Ethernet cables and set up additional workstations in the packaging area to support increased production capacity.
- Designed and implemented custom Microsoft Excel macros in VBA to automate tasks and improve operational efficiency in the receiving area.

Template Engineer | Dataforma | York, PA 17401 | March 2023 - Aug 2024

- Manipulated MS Office document templates from companies using RTF, HTML, and Java to achieve customer requests and database retrieval
- Operated mass database overwrites for companies that needed information updated
- Cooperated with clients to fix possible issues or additions with fast turnaround times

Computer Science Projects

Delve | Multiplayer dungeon delver | 2024 - Present

- Diving into behavior trees for enemy combat and phases of enemy and NPC behavior
- Utilizing EQS to control enemy pathing and combat distancing from enemy target
- Created an inventory system that is easy to integrate additional items when needed

Radio Telescope | York College of Pennsylvania | Fall 2022

- Worked on a pre-existing backend with little documentation on its capabilities or alumni present who worked on it prior
- Developed simple gate system within in Unity for the visual program showing capabilities of the telescope
